

To be successful, the dentist in private practice must learn and become proficient in areas that are challenging, interesting, up-to-date, and financially rewarding. In Atlantic Dental Implant Seminars (ADIS), the clinician will learn how to determine the cases that are ideal for dental implants, how to attract patients who desire comprehensive care, how to perform implant surgery and restore implants, and how to build and maintain a thriving dental practice centered on complete and comprehensively focused patient care.

Our team of world-class expert practitioners, educators, and researchers provide dynamic lectures, personalized hands-on training, and live surgeries. Our courses are offered in Clifton, New Jersey, Kingston and Montego Bay Jamaica.

Special implant programs can be scheduled for presentation throughout the USA and internationally.

Dentists are encouraged to bring their own implant cases, with radiographs and mounted diagnostic casts, to Atlantic Dental Implant Seminars for discussion and guidance. After completion of an Atlantic Dental Implant Seminar, attendees can contact faculty members by e-mail, telephone, or fax for assistance in diagnosis and treatment planning of implant cases for their patients.

Atlantic Dental Implant Seminars are given in association with and endorsed by the American Academy of Implant Prosthodontics and the Linkow Implant Institute.
